Solace™ QL® Press-to-Release Inflation Device

The Solace QL Press-to-Release Inflation Device combines enhanced design features to provide a high quality, economical solution for balloon catheter dilation and fluid dispensing. The Solace QL Press-to-Release Inflation Device features a spring-loaded locking mechanism which allows users to easily prep the device and quickly inflate or deflate a balloon, even at high pressures.

20cc/30ATM Solace™ QL®

REF Number	Product Description	Case Quantity
622517	20cc/30ATM Inflation Device with 3-way Stopcock	10

SwitchBack™ QL® Inflation Device

The SwitchBack™ QL® Inflation Devices with luminescent analog pressure gauge are available for a wide array of clinical applications such as balloon dilation and stent delivery.

Low-profile design and ergonomic handle make them easy to manipulate. The Quick-Latch mechanism allows for one-handed deflation, even when fully pressurized.

The clear blue polycarbonate syringe barrel accommodates small to very large balloon sizes and provides easy viewing of syringe contents and purging of air bubbles.

610420

Indications for Use:

The Metal Guidewire Insertion Tool is designed to facilitate guidewire entry into the Y-Connector.

The Single and Double Y-Connectors provide a method for aspiration and flushing during performance of dilation.

The Torque Device is used to facilitate the manipulation of a guidewire into a vein or artery.

The Switchback™ QL® and Solace QL® Inflation Devices are recommended for use while performing balloon dilation procedures to inflate the balloon, monitor the pressure within the balloon and deflate the balloon.

Refer to the Instructions for Use for relevant warnings, precautions, complications and contraindications. These devices are designed for single use only.
